Bee Line 22000 Trailer Axle Aligner

A properly aligned trailer will travel straight and pull with ease, virtually eliminating excessive or irregular tire wear. The proven Bee Line 22000 Tandem Axle Aligner lets you accurately position your axles perpendicular to the trailer's centerline (setting track), allowing the wheels to travel in a straight line.

The Bee Line Advantage

- » **Significantly reduce the leading cause of tire wear** when you accurately position your rear axles perpendicular to the trailer's centerline allowing the wheels to travel in a straight line.
- » Innovative product design features eliminate the need to raise the trailer off the floor, enabling you to **quickly gauge the suspension alignment in its operational position using "live" readings.**
- » **Improve customer satisfaction** and make a positive impact on axle mounting cycle time.
- » Bee Line also offers professional equipment to **gauge axles for proper toe and camber** in addition to setting track.

Cabinet Computer System

Pair the 22000 Bee Line Tandem Axle Aligner with a computer system and you will be equipped with all of the components needed to communicate and store the readings.

TLC750W System Includes:

- Cabinet Computer System
 - Monitor, Keyboard, PC, On-board Printer
- Electronic Tandem Target (hangs from king pin)
- Programming Cable
- Network Cable

Axle Tracking Alignment - Truck/Bus		
Measurement	Initial	Final
Axle #1		
Axle #2	+0.01°	+0.01°
Axle #3	-0.004°	-0.004°
